Abstract

An organization's knowledge has always been critical to its competitive success; efficient operations come from shared knowledge of how things work [1]. This is a case study at a medium size trading company in the north of Greece. The research area is its network and information safety. The research methods used are interviews and observation of its operations which was reported in this paper analyzed. The purpose of it is to show the security breaches and suggest ways to minimize it. The paper also aims to increase company's competition advantages proving the above statement true.
